FLE TRIBE

BONUS COURSE · AI IN FRONTEND WITH CLAUDE · MONDAY · LESSON GUIDE

What AI can and can't do

This course: Use Claude in the browser at claude.ai as a tutor, pair programmer and prototyping tool, while keeping your own skills sharp.

What a large language model does

Claude is a large language model. It learned patterns from a huge amount of text and code, and it generates answers by predicting what text should come next. That makes it very good at explaining, drafting and spotting patterns, but it can also produce answers that sound confident and are wrong.

Using Claude in the browser

Go to **claude.ai**, sign in and start a chat. You don't need an editor or anything installed. You can paste code, upload screenshots of errors, and ask follow-up questions.

Limits to keep in mind

- It can be **wrong or out of date**, especially about very new library versions.
- It only knows what you tell it about your project.
- Always run and check the code it suggests.

Rules for this course

- Never paste passwords, API keys or private company code.
- Use AI to understand, not to skip learning: you must be able to explain every line you submit.
- Say when you used AI in an assignment, and what for.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Ask Claude an React question you already know the answer to. Was it right?
2. Find one case where it was wrong or out of date.
