FLE TRIBE

BONUS COURSE · AI IN FRONTEND WITH CLAUDE · THURSDAY · LESSON GUIDE

Debugging & code review

This course: Use Claude in the browser at claude.ai as a tutor, pair programmer and prototyping tool, while keeping your own skills sharp.

Ask for help with an error

Give Claude what a senior developer would need:

```
I'm running: npm run dev
I expected: the product list to show
What happened: blank page, and this error in the console:

[paste the full error]

Here's the component: [paste code]
```

Ask for a code review

- "Review this component for accessibility issues."
- "Are there edge cases I'm not handling?"
- "Suggest clearer names for these variables."
- "Write 3 tests for this function."

Check before you trust

- Run every suggestion and confirm it fixes the problem.
- If two fixes in a row don't work, stop and read the docs for that library.
- Make sure you understand the fix well enough to explain it on Saturday.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Paste a real error from your project. Did Claude's fix work first time?
2. Ask for an accessibility review of one component and apply what's correct.
