FLE TRIBE

BONUS COURSE · AI IN FRONTEND WITH CLAUDE · WEDNESDAY · LESSON GUIDE

Prototyping with Artifacts

This course: Use Claude in the browser at claude.ai as a tutor, pair programmer and prototyping tool, while keeping your own skills sharp.

Artifacts

When you ask Claude to build a small page or component, it can show it as an **Artifact**: a live preview next to the chat that you can click through. It's a quick way to try ideas before you write the real thing.

```
Create a pricing card in HTML and Tailwind CSS with
three plans (Basic, Pro, Team). Use #3f09c9 as the
brand colour. Make it responsive.
```

Iterate in small steps

- Change one thing per message: "make the Pro plan stand out", "add a monthly/yearly toggle".
- Ask why it made a choice if you don't understand it.
- Keep the version you like by copying it to your notes.

Projects

Use a **Project** on claude.ai to keep the course brief, your notes and your assignment requirements as context, so you don't repeat them in every chat.

From prototype to React

The prototype is a sketch, not your submission. Rebuild it yourself as React components: decide the component tree, the props, and where state lives, then write it. That's where the learning happens.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Prototype a pricing card as an Artifact in 3 iterations.
2. Which parts of the prototype would become separate React components?
