FLE TRIBE

BONUS COURSE · TAILWIND CSS · TUESDAY · LESSON GUIDE

Tailwind core

This course: Style React apps fast with Tailwind's utility classes, and compare it with Bootstrap.

How Tailwind works

Instead of writing CSS in a separate file, you add small single-purpose classes straight to your HTML or JSX. Each class does one thing.

```
<button class="rounded-lg bg-indigo-600 px-4 py-2 font-semibold text-white hover:bg-indigo-500">
  Sign in
</button>
```

Cheat sheet

- **Spacing**: `p-4` padding, `px-4` left/right, `mt-2` margin-top, `gap-3` gap.
- **Size**: `w-full`, `max-w-md`, `h-12`.
- **Colour**: `text-slate-700`, `bg-white`, `border-slate-200`.
- **Type**: `text-lg`, `font-bold`, `leading-tight`.
- **Flex**: `flex items-center justify-between gap-4`.
- **Grid**: `grid grid-cols-1 md:grid-cols-3 gap-6`.
- **Borders & corners**: `border rounded-xl`.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Rebuild your Week 04 navbar in Tailwind.
2. How does Tailwind remove CSS you don't use?
