FLE TRIBE

WEEK 00 · THURSDAY · LESSON GUIDE

How to learn like a developer

This week: Understand the industry you are entering, the roles inside it, and exactly where a frontend developer fits, so the next 5 months make sense.

Learn from documentation, not only videos

Videos are great for first understanding. Documentation is where you go for exact answers, and it is what working developers use every day. Get comfortable with **MDN Web Docs** (HTML, CSS, JavaScript) and **react.dev** early.

How to ask a good question

- Say what you were trying to do.
- Show what you tried (code, screenshot of the error).
- Say what you expected to happen, and what actually happened.
- Copy the exact error message instead of describing it.
- Remove everything that isn't needed to show the problem.

Keep a learning journal

Write one short entry every study day with three headings:

- **Learned**: one or two things that clicked today.
- **Confused about**: what still doesn't make sense.
- **Next**: what you'll look at tomorrow.

Bring your journal to the Saturday review. It's the fastest way to see how far you've come.

Set up today

- A modern browser: Chrome or Firefox.
- A free GitHub account (github.com/signup).
- A notes app for your journal (Notion, Google Docs or a notebook all work).

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. What makes a good question on a forum? Find one good and one bad example.
2. Create your GitHub account and write your first journal entry.

Start your research here
