FLE TRIBE

WEEK 10 · WEDNESDAY · LESSON GUIDE

Branches & merging

This week: Use the terminal confidently and track every change to your code with Git.

Why branches

A branch is a separate line of work. Build a feature on a branch, and `main` stays working until the feature is ready.

The everyday flow

```
git switch -c add-filter     # create and move to a branch
# ...edit, then:
git add .
git commit -m "Add status filter"
git switch main
git merge add-filter         # bring the work into main
git branch -d add-filter     # tidy up
```

Merge conflicts

A conflict happens when two branches changed the same lines. Git marks them in the file:

```
<<<<<<< HEAD
<h1>My Tasks</h1>
=======
<h1>Task Manager</h1>
>>>>>>> add-filter
```

Keep the version you want, delete the markers, then `git add` and `git commit`.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Create a conflict on purpose and fix it.
2. Play the first levels of Learn Git Branching.
