FLE TRIBE

WEEK 11 · THURSDAY · LESSON GUIDE

Your editor: VS Code, Prettier & ESLint

This week: Share code on GitHub, work with others through pull requests, and use npm and a professional editor setup.

VS Code basics

- **Cmd/Ctrl + P**: open any file by name.
- **Cmd/Ctrl + Shift + F**: search the whole project.
- **Ctrl + `**: open the built-in terminal.
- Extensions to install: Prettier, ESLint.

Prettier: formatting you never think about

Install the Prettier extension, then in Settings turn on **Format On Save** and set Prettier as the default formatter. Every save now tidies spacing, quotes and line length the same way for everyone.

ESLint: catch mistakes early

ESLint reads your code and flags problems before you run it: unused variables, typos in names, missing dependencies in React effects. Vite's React template already includes it: run `npm run lint`.

```
npm run lint
```

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Set up Prettier to format on save. What changed in your code?
2. What kind of bug can a linter catch?

Start your research here

- VS Code: getting started: https://code.visualstudio.com/docs/getstarted/getting-started

- **Prettier**: https://prettier.io/docs/install
- **ESLint**: https://eslint.org/docs/latest/use/getting-started
