FLE TRIBE

WEEK 11 · TUESDAY · LESSON GUIDE

Pull requests & code review

This week: Share code on GitHub, work with others through pull requests, and use npm and a professional editor setup.

What a pull request is

A pull request (PR) asks to merge your branch into `main`. It shows every change, and teammates can comment before anything is merged.

Open one

- Push your branch: `git push -u origin add-filter`.
- On GitHub, click **Compare & pull request**.
- Write a title and a short description: what changed, why, and how to check it.
- Add a screenshot for anything visual.

Review kindly

- Comment on the code, not the person.
- Ask questions: "What happens if the list is empty?"
- Suggest, don't demand, and explain why.
- Approve when it's good enough, not perfect.

Issues

Use GitHub Issues to track bugs and tasks. Mention an issue in a PR ("Fixes #3") and it closes when the PR is merged.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Open a pull request on your own repo and review it as if it were someone else's.
2. What makes a code review comment helpful?

Start your research here

- GitHub: about pull requests: https://docs.github.com/en/pull-requests/collaborating-with-pull-requests/proposing-changes-to-your-work-with-pull-requests/about-pull-requests
