FLE TRIBE

WEEK 12 · FRIDAY · ASSIGNMENT BRIEF

Product catalogue

Build a React + Bootstrap app that lists products and lets the user filter them.

Due: Friday, 23:59 **Submit:** GitHub repo link

Done when

- [ ] At least 4 components (header, search bar, product list, product card)
- [ ] Products kept in state; the filtered list and count are calculated during render
- [ ] Search by name and filter by category
- [ ] Empty state when nothing matches; responsive grid with Bootstrap

How to submit

GitHub repo link, by 23:59 on Friday. Submit it in the app on this week's Friday page: paste the link to your work and add notes for your reviewer (what you built, one thing that broke, and how you fixed it).

Complete the task **independently**. You may research and ask questions, but the work must be your own.

How it's reviewed

- **Works**: it does what the brief asks.
- **Clean**: readable, well named, no dead code.
- **Understood**: you can explain every line.
- **Shipped**: submitted on time, with a short README.

Be ready to discuss on Saturday

- Show your component tree.
- How does data flow from parent to child and back up?
- What clicked about state, and what didn't?
