FLE TRIBE

WEEK 17 · WEDNESDAY · LESSON GUIDE

Data & state

This week: Plan an original React app and build its core feature.

Model your data

Write down what one item looks like before you build:

```
// one event
{
  id: 'e1',
  title: 'Youth tech meetup',
  date: '2026-12-05',
  location: 'Yaba, Lagos',
  seats: 40,
}
```

Where does it come from?

- **An API**: fetch it, with loading and error states (Week 09 and 15).
- **A JSON file**: import it, simplest for a first version.
- **The user**: a form, saved with `useLocalStorage` (Week 13).

Place your state

Use the Week 13 steps: find the minimal state, then keep it in the closest shared parent or in Context.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. Write down the shape of one item in your data.
2. Which component owns each piece of state?

Start your research here
