FLE TRIBE

WEEK 18 · MONDAY · LESSON GUIDE

Responsive & accessible

This week: Finish, polish and present your capstone.

Check it on a phone

Open DevTools, switch on the device toolbar, and test at 375px and 1280px. Nothing should scroll sideways, and every button should be easy to tap.

Accessibility basics

- Every image has `alt` text; every form field has a `<label>`.
- You can use the whole app with only the keyboard, and you can always see where the focus is.
- Text is readable against its background (contrast).

Run Lighthouse

Open DevTools → **Lighthouse**, choose Mobile, tick Accessibility and Performance, then run it. Fix the top three issues and run it again.

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. What did the keyboard test reveal?
2. What's your Lighthouse accessibility score now?
