FLE TRIBE

WEEK 07 · MONDAY · LESSON GUIDE

Arrays

This week: Work with lists and records of data, and write clean modern JavaScript.

An array is an ordered list

```
const scores = [72, 85, 90];
scores[0];        // 72 (counting starts at 0)
scores.length;    // 3
scores[scores.length - 1]; // 90, the last item
```

Changing an array

- `push(x)` adds to the end; `pop()` removes from the end.
- `unshift(x)` adds to the start; `shift()` removes from the start.
- `splice(index, count)` removes items from the middle.
- `includes(x)` and `indexOf(x)` check what's inside.

Looping through an array

```
let total = 0;
for (const score of scores) {
  total += score;
}
console.log(total / scores.length); // the average
```

Research questions

Answer these in the app, in your own words, to unlock the next lesson.

1. What is the index of the last item in any array?
2. Write a function that returns the largest number in an array.
