FLE TRIBE

WEEK 08 · FRIDAY · ASSIGNMENT BRIEF

Interactive to-do list

Build a to-do list app with plain HTML, CSS (or Bootstrap) and JavaScript.

Due: Friday, 23:59 **Submit:** A shared link (CodePen, Google Drive or GitHub)

Done when

- [ ] Add tasks with a form; empty tasks show an error message
- [ ] Mark tasks done and delete them
- [ ] Filter: all, active, done
- [ ] Shows a friendly message when the list is empty

How to submit

A shared link (CodePen, Google Drive or GitHub), by 23:59 on Friday. Submit it in the app on this week's Friday page: paste the link to your work and add notes for your reviewer (what you built, one thing that broke, and how you fixed it).

Complete the task **independently**. You may research and ask questions, but the work must be your own.

How it's reviewed

- **Works**: it does what the brief asks.
- **Clean**: readable, well named, no dead code.
- **Understood**: you can explain every line.
- **Shipped**: submitted on time, with a short README.

Be ready to discuss on Saturday

- Demo adding, completing and deleting a task.
- How did you keep the screen in sync with your data?
- What would break if you used <code>innerHTML</code> for task names?
