FLE TRIBE

WEEK 09 · FRIDAY · ASSIGNMENT BRIEF

Weather now

Build a small web app that shows the current weather for a city the user types.

Due: Friday, 23:59 **Submit:** A shared link (CodePen, Google Drive or GitHub)

Done when

- [ ] Uses the free Open-Meteo API (no key needed)
- [ ] Shows loading, success and error states
- [ ] Remembers the last 5 searches with localStorage
- [ ] Styled and responsive with your own CSS

How to submit

A shared link (CodePen, Google Drive or GitHub), by 23:59 on Friday. Submit it in the app on this week's Friday page: paste the link to your work and add notes for your reviewer (what you built, one thing that broke, and how you fixed it).

Complete the task **independently**. You may research and ask questions, but the work must be your own.

How it's reviewed

- **Works**: it does what the brief asks.
- **Clean**: readable, well named, no dead code.
- **Understood**: you can explain every line.
- **Shipped**: submitted on time, with a short README.

Be ready to discuss on Saturday

- Demo your app with the network throttled to Slow 3G.
- How did you structure your code?
- What would change if the API needed a secret key?
